

Circular Sample Collector

Model No. 2096

This device is designed to quickly collect circular samples such as those described below. It provides precise cutting, preventing sampled sheets from being crushed or from having uneven cut edges. A double-edged razor is installed, which can be replaced easily.

1. Samples for a delamination test with an area of 19.36cm² and a diameter of 60.7 mm (for a Mullen high pressure tester) center hole diameter 34.9mm
2. Samples for a flat crush test with an area of 32.2cm² and a diameter of 64mm
3. Samples for a basis weight test with an area of 100cm² and a diameter of 112.8mm

Specifications

Outer Dimensions: 83 to 135mm in diameter,
120 to 136mm high

Instrument Weight: 3kg
