

## Double-Blade Cutter for Elmendorf Tearing Test

**Model No. 2133**

This cutter allows rapid preparation of tearing test specimens with an accurate width. One cycle of cutting produces several specimens free of lint. Most suitable for the tearing test. Two blades are mounted on the handle to cut both ends at a time. This ensures an accurate cutting width. A specimen-holding plate permits safe cutting without causing cockle or waviness. Safety design: when the upper knob is set to the specified position, it is impossible to push down the handle.

### Specifications

<b>Cutting Length:</b>	180mm
<b>Cutting Width:</b>	63mm
<b>Outer Dimensions:</b>	220 x 290 x 260mm
<b>Instrument Weight:</b>	11kg
