Sample Punch for Stiffness and Tear Tests

Code N3001-X

For easy and fast preparation cutting of samples for bending stiffness and Elmendorf tearing tests.

Choose dimensions when you order:

I x L: 38 x 75 mm

I x L: 38 x 70 mm

I x L: 50 x 62 mm

I x L: 50 x 65 mm

N3001S - Other size on request

Weight (equipment only): 55 kg

Dimensions (W x L x H - equipment only): 100 x 300 x 200 mm

PROCESS DESCRIPTION:

The material to be punched is placed against the rest on the lower blade. When the hand lever is pushed down, the sample is evenly cut and falls through the die below the punch, where it can then be removed from the side. The Sample Punch consists of a triangular upper and lower blade. The punch is operated via a hand lever.

The material to be punched is placed on the lower blade
