PAPER TESTING ASSOCIATION

Edge Crush Test Saw (ECT - Billerud Type)

Code N5501

Cuts samples of corrugated cardboard up to a thickness of 20 mm for ECT test.

Standards: ISO 3037

Test Description:

Cutting samples for ECT test, is manufactured as replacement of the pneumatic model of two blades, when the cartons are very resistant. It is composed of two circular saw blades that rotate at high speed. Specially designed for double-double and triple cartons with high grammages. Built-in vacuum cleaner for recollection of the remains produced by the cut. High loudness equipment that advises using hearing protection cases. Perfect cut.

Specifications:

- Double rotational cutting saw.
- For thicknesses of up to 25 mm or high grammage and quality papermaking compositions.
- Built-in vacuum cleaner for cutting remains recollection.
- Clean and parallel cut.
- Simple and quick blade change.
- CE Marking
