

KRK KUMAGAI RIKI KOGYO

Heat Seal Tester

Model No. 2348

Heat seal tests on plastic films and laminated materials determine the strength and other characteristics of a specimen's heat-sealed section. For that purpose, heat-sealed specimens must be fabricated first. This tester provides flexible setting of the heat seal conditions, including the heating bar temperature, pressure and pressurizing time, helping fabricate specimens easily in a laboratory.

Heat Plate Size	15mm wide×200mm long
Temperature	max. 200°C
Compression Pressure	0.5MPa
Compression	pneumatic
Compression Time	0.2sec. to 10min
Upper Heating Bar	heater 300W, temperature sensor Inserted
Lower Heating Bar	with built-in impulse heater
Power Source	100/110VAC 50/60Hz 7A
Air Source	0.5Mpa
Outer Dimensions	850×500×500mm
Instrument Weight	90kg
